

d.BOBO Think-Build System

End of Cycle 3: Multi-Agent Pipeline Operational

Engineers: Cameron Stanford, Carter Hand

Sponsor: Joel Mackall

Date: April 2026

Cycle 3 was fundamentally about **completing the full system pipeline**, not just improving individual components.

Cycle 3 Mission & Goals

Goal / Objective	Status
Build and deploy GPT 2 — Custom	✓ Complete
Build and deploy GPT 3 — SIPOC	✓ Complete
Build and deploy GPT 4 — Serve Funnel & Launch	✓ Complete
Complete the full GPT-to-GPT handoff pipeline	✓ Complete
Confirm Google Sheets logging and email notifications	✓ Complete
Validate full end-to-end execution	✓ Complete

System Concept: The d.BOBO 6-Pack

Six Essential Business Instruments

- Asili — origin story / seed of the business
- Mission — what the business does and for whom
- Vision — measurable future outcome
- Custom — best customer and value proposition
- SIPOC — operations and cost structure
- Serve Funnel — sales path and launch checklist

Framework Structure

- Think Diamond: Asili, Mission, Vision, Custom
- Build Diamond: SIPOC, Serve Funnel

 Fully implemented through 4 specialized GPTs.

Full Multi-Agent Architecture

 Each GPT has a strictly defined scope

 Stage-based conversation flow

 Each GPT ends with a rigid checkpoint

 Passes structured context forward

 Architecture Principle: No overlap, no improvisation, no drift.

GPT Breakdown: Specialized Deliverables

GPT 1 — Think

- Asili story & Team identification
- African proverb & Image/metaphor
- Mission statement
- Vision statement

GPT 2 — Custom

- Starting customer profile
- Needs-and-answers chart
- Final Custom Statement

GPT 3 — SIPOC

- Supplier → Input → Process → Output → Customer map
- Cost of Quality & Cost of Poor Quality

GPT 4 — Serve Funnel

- Awareness stage & Channels
- Customer journey mapping

Handoff & Data Pipeline

Automated Handoff Sequence

- Founder reaches GPT checkpoint
- GPT generates structured JSON summary
- Summary is pushed to [Google Apps Script endpoint](#)
- Google Sheet logs the session data
- Email notification is dispatched to Joel
- Founder receives link to next GPT stage

Implementation Across All Stages

- Dedicated endpoint per GPT handoff
- Google Sheet tab per GPT stage
- Timestamped session records & consistent emails
- Zero manual logging required

Problem Solved: LLM Drift & Lane Discipline

✖ Before: The Drift Issue

- GPT attempted to continue beyond its defined stage.
- Mixed Custom, SIPOC, and Funnel concepts prematurely.
- Introduced mainstream/generic startup advice.
- Drifted into standard MVP/Validation thinking instead of d.BOBO framework.

After: Cycle 3 Controls

- Identity declaration embedded in every prompt.
- Strict scope exclusion list applied.
- Repeated anti-hallucination instructions.
- Hard stops enforced at each checkpoint.
- Behavior redirection instead of unconstrained improvisation.

Cycle 3 End-to-End Test Results

Stage	Behavior Constraint	Handoff Trigger	Email Routing	Overall Result
GPT 1 — Think	✓ Correct	✓ Sent	✓ Delivered	PASS
GPT 2 — Custom	✓ Correct	✓ Sent	✓ Delivered	PASS
GPT 3 — SIPOC	✓ Correct	✓ Sent	✓ Delivered	PASS
GPT 4 — Serve Funnel	✓ Correct	✓ Sent	✓ Delivered	PASS

All four GPTs tested successfully in sequence without hallucination or endpoint failure.

Joel approved final configuration. Ready for deployment.

Final System State & Next Steps

Completed Now (Core)

- 4 GPTs complete and deployed
- Full multi-agent pipeline operational
- Handoff endpoints live and active
- Google Sheets logging active
- Email notifications working perfectly
- Text-based progress indicator implemented
- Sponsor-approved final configuration

Future Enhancements (Optional)

- Session persistence / resume from checkpoint
- Visual progress stepper integration
- Website embedding or standalone UI
- Real founder onboarding at larger scale

The **d.BOBO Think-Build System** is now a production-ready AI workflow that reliably guides founders from idea origin to launch readiness.
